## 1998 AUCKLAND POWER CRISIS

in January and February 1998, when electricity supply to the New Zealand's worst recent infrastructure failure occurred Auckland central business district (CBD) was disrupted for almost 2 months.

Sixty thousand of the 74 000 people who usually worked in apartment residents had to find alternative accommodation. Generators were brought in to the CBD to power essential services, such as Auckland Hospital, but most shops and the CBD had to work from home or in relocated offices businesses could not operate. Around 6000 inner-city elsewhere in Auckland or further away.

cables failed on 19 and 20 February, leaving most of the

CBD without power.

another on 9 February. The two remaining overloaded electricity. One cable failed on 20 January, followed by Four cables supplied almost all of the Auckland CBD's

and electricity restored to the CBD. The long-term economic impact was estimated at 0.1-0.3 per cent of GDP, and many It was 5 weeks before an emergency cable was completed small businesses never recovered from the event.
